Outstanding solutions for demanding applications

The birth of dedicated vibration cutting tools

Cutting tools developed to maximize performance for vibration cutting and achieve efficient machining.
The best selection of tooling to cover a large range of machining applications.

CITIZEN MACHINERY CO., LTD.

Achieving extended tool life and stable cutting performance in vibration cutting

Performance

- **Significantly reducing damage of cutting edge**
Extended lifespan can be expected even in the machining of difficult-to-cut materials
- **More stable of chip control**
Stable chip formation during vibration cutting

Applications

Front turning process using an automatic lathe with vibration cutting function

Cutting conditions

Grade	Material	Machining method	Cutting conditions			Vibration condition (LFV)		
			Cutting speed (m/min)	Feed (mm/rev)	D.O.C. (mm)	P	Q	D
ST4	Austenitic stainless steel (SUS304 / SUS316 etc)	Front Turning	40 - 100	0.02 - 0.06	0.5 - 2.0	Mode 1	0.5	0.5
DM4	Carbon steel / Alloy steel (SCM435 / S45C etc)	Front Turning	50 - 120	0.02 - 0.06				
TM4	Non-ferrous (Aluminum / Titanium etc)	Front Turning	60 - 150	0.02 - 0.06				

- ⚠ Our products are designed with a low cutting edge, please use them after aligning with the center.
- ⚠ When using insert radius R0.08, please set the feed rate to 0.02mm/rev or less. If you want to increase the feed rate beyond 0.02mm/rev, we recommend using the [Mode 2 / E4.0 / R0.5]
